## 3D Systems New VisiJet X Material Delivers ABS Plastic Performance

- New VisiJet X Plastic Material Available Immediately
- First Jetted Plastic With Performance Of Injection Molded ABS
- High Temperature Resistance Right Out Of The Printer

**ROCK HILL, South Carolina, November 29, 2012** – [3D Systems](#) Corporation (NYSE:DDD) announced today the immediate availability of its new VisiJet<sup>®</sup> X Plastic Material, the first jetted plastic available with the look, feel and performance of injection molded ABS plastic ideal for prototyping, product mockups and end-use applications requiring extreme toughness and high temperature resistance.

New [VisiJet X](#) plastic works in 3D Systems' [ProJet<sup>®</sup> 3500 3D Printers](#) including the SD, HD, HD*Plus* and new HD*Max* models , and provides new levels of durability and functionality previously unattainable with a jetted plastic.

“Our new VisiJet X material is a revolutionary breakthrough in jetted plastics,” said Buddy Byrum, Vice President of Product & Channel Management for 3D Systems. “VisiJet X parts have the toughness and durability of ABS for both prototyping and end use applications, and a heat deflection temperature of 88°C right out of the printer with no additional tempering needed. Best of all, VisiJet X parts look great with a stunning white finish that really looks like it came from an injection mold.”

3D Systems' ProJet 3500 series, together with its expanded range of other affordable ProJet printers, ZPrinters<sup>®</sup> and BfB<sup>™</sup> printers are sold and serviced through its global network of Authorized Reseller Partners. Contact your local reseller or visit

### **About 3D Systems Corporation**

3D Systems is a leading provider of 3D content-to-print solutions including 3D printers, print materials and on-demand custom parts services for professionals and consumers alike. The company also provides CAD, reverse engineering and inspection software tools and consumer 3D printers, apps and services. Its expertly integrated solutions replace and complement traditional methods and reduce the time and cost of designing new products by printing real parts directly from digital input. These solutions are used to rapidly design, create, communicate, prototype or produce real parts, empowering customers to create and make with confidence.
